PROFILE

Computer Science Engineering student building web applications, IoT systems, and AI/ML projects. Co-Founder of XTICH, with hands-on experience across frontend development, product building, automation, and technology entrepreneurship.

EDUCATION

Jain Institute of Technology, Davangere
Bachelor of Engineering in Computer Science Engineering

2025 – 2029
Davanagere, Karnataka

TECHNICAL SKILLS

Programming	Python, JavaScript, TypeScript, C
Web Development	React, HTML, CSS, Tailwind CSS, Vite
AI / ML	Machine Learning, Deep Learning, TensorFlow, Data Analysis
IoT	ESP8266, Arduino IDE, Telegram Bot API, Wi-Fi
Developer Tools	Git, GitHub, VS Code, LocalStorage
Core Interests	Artificial Intelligence, Full-Stack Development, Automation, IoT, Entrepreneurship

EXPERIENCE

XTICH

Co-Founder

Student Apparel & Branding Startup

- Co-founded XTICH, a student-focused apparel and branding company built around college identity, merchandise, and custom clothing.
- Contribute across product strategy, branding, digital presence, go-to-market planning, and student-focused community engagement.
- Designed and developed XTICH's web presence, combining frontend development, visual design, interactive experiences, and brand identity.

Versity — Sub-Brand of XTICH

2025 – Present

Contributor, Student Uniform Innovation

- Developing Varsity as a sub-brand of XTICH focused on modernizing traditional student uniforms through contemporary design and branding.
- Contribute to product concepts, visual identity, and digital experiences designed around modern student needs.

PROJECTS

EchoVerse — AI-Powered Memory Operating System | *Next.js, Express, MongoDB, OpenAI*

2025

- Built an AI-powered memory operating system designed to manage, organize, and retrieve contextual information using modern web technologies and AI services.

Doubt System — Student Learning Platform | *HTML, CSS, JavaScript*

2025

- Built a web platform for student question submission, academic collaboration, and efficient navigation.

SecureVault — Password Manager | *HTML, CSS, JavaScript, LocalStorage*

2025

- Built a responsive password-management dashboard with password generation, categories, search, filtering, and persistent local storage.

MH-Steering-Wheel | *Python*

2025

- Developed a Python-based steering-wheel project.

IoT Laser Security System | *ESP8266, Arduino IDE, Telegram Bot API, Wi-Fi*

2025

- Developed an ESP8266-based security system that detects laser-beam interruptions and delivers remote alerts via Telegram.

Personal Portfolio — React / TypeScript | *React, TypeScript, Tailwind CSS, Vite*

2025

- Designed and developed a responsive interactive portfolio featuring modern UI, animations, and video-based visual experiences.

ADDITIONAL

- Currently expanding knowledge in Artificial Intelligence, Machine Learning, Deep Learning, Neural Networks, Data Analysis, and TensorFlow.
- Interested in building technology products at the intersection of software engineering, AI, entrepreneurship, and real-world applications.
